Owned, fresh, provably bilingual content

ARCHITECTURE

Application · Technology · Business information · Other system (not built here)

Served to staff, in English and French

Staff browser
English or French

→ **Reverse proxy cache**
Purged per language on publish

→ **Drupal + GC Design System**
Full-stack pages · bilingual workflow · owner and review date on every page

Drupal feeds search, analytics, video and one report

Apache Solr search
One bilingual index, filtered by language

Matomo analytics
Use by topic and language; no personal data

Video
ffmpeg renditions · Video.js · EN and FR captions

Reporting schema
Content health report: stale and unowned pages

Shared taxonomy: one vocabulary used by Drupal, Solr facets, Matomo dimensions and reports

Connects to departmental systems (owned elsewhere)

Identity Solution
Single sign-on

Identity service
Nightly directory

Exchange
Mail, availability

ECM
Archive via ECM-API

Streaming platform
Live events (link)

ServiceNow
Catalog, Release 2

Delivered as signed releases, built once and deployed to the isolated network

Build network
Internal mirrors

→ **Signed artefacts**
Controlled transfer

→ **Development**
Code works

→ **Staging**
Real data, real links

→ **Production**
Deploy-only

Six principles that guide every decision

P1 Accessible by default
WCAG 2.1 AA checked in every build

P2 Bilingual parity, provable
EN and FR equal at every layer, counted apart

P3 Automated
People decide; the system does the routine

P4 Transparent
Owners see how their own pages perform

P5 Secure by design
Sign-on, roles, audit logs, signed releases

P6 Extensible, not headless
Drupal renders; JSON:API for later channels

OUTCOMES WE CAN PROVE

1 Current, owned content
Named owner and review date on every page. The health report flags stale and unowned pages; owners keep, refresh or retire.

2 Owners see their readership
Owners see views by language, how readers arrived and “was this useful?”; executives see divisions. Aggregate, never individuals.

3 Provably bilingual
Linked EN–FR page pairs. Pages, search lag, zero-result rate and traffic are counted per language, never combined.

4 Accessible to every employee
WCAG 2.1 AA is pass/fail, tested in every build and by post-publish crawls. CAN/ASC-EN 301 549 conformance report for audit.

5 Staff find what they need
Shared taxonomy, bilingual synonyms and facets. Relevance is tested by first-language speakers in each language.

6 Video that just plays
Plays in the browser at four qualities with EN and FR captions. Plays are reported per video and per language.

7 Secure and supportable
Signed, deploy-only releases, role-based access and audit logs. Environments rebuilt from version-controlled files.

Who runs it, and the main risk

Communications owns content and report interpretation; IT owns the platform and Matomo set-up. The main risk is not technical: it is resourcing both across the full lifecycle, beyond the project phase.
